January 2010

Tacktick to exhibit Suunto sports precision marine watches at London Boat Show 2010

Following Tacktick's acquisition by Suunto in 2009, Tacktick will for the first time be displaying the full range of Suunto marine compasses and watches at the London Boat Show in January 2010 on stand N029A in the North Hall.

Suunto's Marine Series of sports precision instruments analyse prevailing conditions to deliver important navigational information directly to your wrist. The range of Suunto marine wristops includes:

The Suunto Yachtsman which offers a multitude of functions in a stylish aluminium casing to suit every sailing enthusiast. The Yachtsman is not only an essential navigational tool for all sailors but it is also a reliable and accurate timekeeper and an important racing aid. Featuring a four day barometric memory, stopwatch, track bearing and multiple watch functions, the Yachtsman is packed with features to enable safe and responsible sailing.

The Suunto M3 wristop computer which is the perfect watch for competitive sailors. Featuring an advanced sailing timer with synchronisation and smart repeat functions as well as multiple watch, date and alarm features.

The Suunto Regatta which is an indispensable piece of equipment for all those who take their boating seriously. Featuring a sailing timer and compass together with stop watch, track bearing and multiple watch, date and alarm functions.

For more information on all Tacktick and Suunto's marine products visit the website at www.tacktick.com where you can configure the ideal electronics package for your boat and sailing requirements or visit our stand at the London Boat Show, N029A.

Ends

Notes for editors:

January 2010

Tacktick are world leaders in wireless marine electronics delivering an extensive range of wireless instruments that utilise an innovative Micronet technology, allowing the units to function entirely using solar power. Suunto is a leading designer and manufacturer of sports precision instruments for training, diving, marine and outdoor sports. Suunto and Tacktick have now joined forces to bring a stronger collective offering of products and services to the marine sector. The combined strength of Suunto and Tacktick's technologies will accelerate the development of new innovative marine products while also offering possibilities to expand the wireless Micronet, solar-power technologies into other areas of sports precision instruments.
