

Tacktick launch low-cost entry level wireless wind instrument

Tacktick will be launching a new low cost, entry level wireless wind mn30 at the London Boat Show in January 2009 in response to consumer demand.

Everybody loves Tacktick's wireless electronics but not everybody needs the sophistication of the mn100 Micronet Wind system hence the launch of this new entry-level basic wind mn30.

This new mn30 wind system is ideal for sailing or power cruising yachts 35ft and under, whether replacing an existing system or installing for the first time. Wind speed and direction information is delivered wirelessly from the wind transmitter, whilst the display itself is powered by the boat's 12v battery. With no wires to run down the mast installation is quick and efficient and makes this an ideal replacement for broken wind systems.

The new mn30 wind system gives true and apparent wind speed and direction (true wind requires boat speed) in a large clear analogue display with backlighting for night sailing.

The new mn30 retails at £399.95 making it an affordable solution for both replacement wind systems and first time installations.

Tacktick remain world leaders in wireless electronics with their extensive range of innovative solar powered electronics covering dinghies, sports boats, cruising and racing yachts through to superyachts. With over 12 years experience and significant numbers of boat owners and boat builders appreciating the freedom and flexibility of no wires as well as proven reliability, the easy choice is Tacktick.

For more information on all Tacktick's products visit the website at www.tacktick.com where you can configure the ideal electronics package for your boat and sailing requirements.

Notes for editors:

December 2008

Tacktick are world leaders in wireless, solar powered electronics for the marine industry. Formed in 1996 by joint managing directors Clive and Mark Johnson, years of extensive research and development, together with customer feedback led to the development of the world's first wireless networking electronics system, Micronet, in 2003. Tacktick offer a range of wireless electronic instruments for dinghies through to race boats, cruisers and power boats too. Top sailors around the world have been sailing with Tacktick's instruments since 1997. In April 2007 Tacktick won the prestigious Queens Award for Innovation for their Micronet technology.

Details of all the Tacktick products and distributors can be found on the Tacktick website, www.tacktick.com
